Coosa River Basin Fish Consumption Guidelines for Nursing and Pregnant Women, and Children

How to Read this Map

The areas of most concern are the Coosa River, and the Etowah and Oostanaula Rivers west of I-75. Women who are pregnant or nursing, or may become pregnant, and children under seven should not eat more than one (1) meal each month of fish caught in these rivers.

Remember--

The contaminants of greatest concern are PCBs; therefore, when you eat fish from these rivers, you should eat panfish such as sunfish and crappie. Try to eat fewer fish high in fat including catfish, sucker, and carp to reduce your exposure to PCBs.

What you should know if you are pregnant, planning to be pregnant, or nursing a child

Remember--
The contaminants of greatest concern are PCBs; therefore, when you eat fish from these rivers, you should eat panfish such as sunfish and crappie. Try to eat fewer fish high in fat including catfish, sucker, and carp to reduce your exposure to PCBs.
The Benefits of Eating Fish and Seafood

Fish and seafood are excellent sources of protein, minerals, and vitamins, and play a role in maintaining a healthy, well-balanced diet. Fish is also an excellent source of Omega-3 fatty acids, which are essential for the development of a healthy baby. According to the American Heart Association, Omega-3 fatty acids in fish and seafood are also essential for good cardiovascular health for adults.

Concerns About Eating Fish and Seafood

Some fish contain contaminants, such as mercury or polychlorinated biphenyls (PCBs) that can be harmful if you eat them too often. Over time, your body may build up harmful levels of toxic chemicals that can affect your pregnancy and the health of your baby. Contaminated fish may not look, smell, or taste different, but they can still harm you and your child. Women who are or may become pregnant should contact their local health department or the Georgia Environmental Protection Division for more detailed information.

Frequently Asked Questions about Eating Fish from the Coosa River Basin

Q. Are fish from the Coosa River Basin safe to eat?
A. Yes, in most instances. However, some types of fish may contain contaminants that are a concern for pregnant women and young children. Women who are pregnant or nursing, or may become pregnant, and children under seven should follow the general recommendations on the map and choose fish that are likely to contain minimal amounts of contaminants.

Q. Which types of fish are most likely to have high levels of contaminants and which types are likely to have low levels?
A. The following chart lists species that typically contain higher levels of contaminants and species that typically contain lower levels. Also, keep in mind that larger fish usually have higher contaminant levels than smaller fish. For example, a 12” largemouth bass will usually be much safer to eat than a 16” largemouth bass from the same body of water.

Q. What can I do to protect myself and my child from chemicals found in fish?
A. Follow the suggestions below:

- Eat safer types of fish and seafood
- Eat a variety of fish and seafood
- Avoid eating fish and seafood known to have high levels of contamination

Find safer ways to prepare fish and seafood

- Before cooking, remove organs, skin and fat as shown in the diagram below
- Cook the fish in a way that the fat can drip away from the fish, such as grilling
- Avoid deep frying fish and seafood

- Limit how much fish and seafood you eat

Nationally, the U.S. Food and Drug Administration (FDA) recommends that pregnant women should eat only a couple of servings of fish and seafood each week

Follow the guidelines in this brochure when eating locally caught fish in your area

What About Store Bought Fish?

Fish and seafood can contain trace amounts of contaminants; fish sold in stores and restaurants are no exception. However, smaller, non-predatory fish generally contain less mercury.

Generally Safe Fish to Eat

Commercial fish and seafood such as flounder, pollock, cod, salmon, shrimp, clams, scallops, oysters, mussels, and farm raised fish, such as catfish, generally are safe to eat.
